

Our Solar System

What else is out there?

Name/s: _____

Other than planets, there are many celestial bodies contained within our Solar System. These include the Sun, comets, meteoroids, dwarf planets and asteroids. Select one of these objects and use the guiding questions to find out more about it. Some questions may not be relevant to the object you have chosen.

- What object have you chosen?

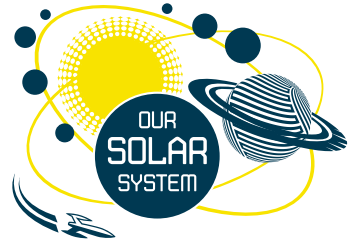

- How is this object defined (i.e. what is it)?

- Where can you find these objects in our Solar System?

- How is the object formed?

Our Solar System

- What do they look like?

- What elements or substances are they composed of?

- What do they do or how do they move?

- What is special or interesting about your chosen body?
